## **Position: Data Integration Manager** **August, 2020**

Join a growing company where your efforts will be pivotal to our success and you'll help transform healthcare quality.

Healthmonix enhances the quality of healthcare delivery to improve patient health and outcomes. Our cutting-edge platform provides industry-leading SaaS-based healthcare quality measurement and improvement solutions.

At Healthmonix we care about how we work together as much as we care about building and delivering state-of-the-art software for our customers. Your work and quality of life matter to us, as the result of your work will impact thousands of medical professionals, hospitals, private practices, and medical education associations who rely on our platform across the country.

We are looking for a collaborative, well-rounded, and detail-oriented data integration manager to lead and direct all data integration services, working directly with developers, account managers, and EHR and EMR business partners to build out and support all API and integration solutions. This is a new role in our organization and provides the opportunity to shape an innovative approach to successfully supporting healthcare organizations across the country.

### **Responsibilities:**

- Understand the needs and priorities for data integration with our current and future client base
- Create an integration experience that is straightforward and simplifies the process of sharing data securely from our clients to our products
- Become an expert on our software, CMS reporting rules and quality measure data requirements
- Work with all members of the team, from pre-sales through implementation
- Analyze, recommend, and influence overall strategy and roadmaps for data integrations
- Work with clients to define goals and expectations, timelines, and integration process
- Document and maintain processes and workflows
- Locate, define, and communicate recommended process improvements and issues to key internal and external resources regarding data quality
- Communicate and collaborate across teams in a compact, Agile environment
- Identify and correct bad data, ensuring data integrity issues are escalated to the proper responsible parties, addressing data issues at the source

## Requirements:

- Experience working as a leader and collaborator in a team-oriented environment
- Experience with healthcare data, EHRs, and/or interoperability
- Persuasive, encouraging, and motivating
- Can manage priorities, demands, and timelines through analytical and problem-solving capabilities
- Strong written, oral, and interpersonal skills
- Adept at conducting research into project-related issues and products – strong analytics skills
- Ability to learn, understand, and apply new technologies
- Knowledge of information management and data governance best practices.
- Expertise in analytics and data analysis, reporting tools, relational databases, and database architecture (SQL a strong plus)
